## # STACK

SMART CONTRACTS

Solidity · Foundry · EVM · OpenZeppelin · Hardhat

FRONTEND

React · Vite · TypeScript · viem · Material UI

INFRA & DATA

Envio · Alchemy · Privy · The Graph

## # COMMUNITY

**Ethereum Slovenia**
Core team member

**Consensys Vanguard**
Invite-only builder ambassadorship

**NAVH 2023 Mentor**
Mentoring at the Consensys Not Another Virtual Hackathon

block #22,481,309
0xb4j…e7f2 · verified builder

## > ABOUT

Web3 engineer from Ljubljana shipping **production smart contracts and dApps** across the EVM ecosystem since 2022. I move between Solidity, Foundry, Envio and the frontend layer fluently, comfortable owning a feature end-to-end, from contract design and audit through to the wallet flow users actually touch. **Long-term believer in an open, decentralized and transparent future.**

## > EXPERIENCE

2024 – present · current

### Senior Web3 Engineer · Blocksquare

Smart contracts, indexing and frontend for an award-winning **real-estate tokenization** protocol. Shipped **Token Offering v2** (ground-up rewrite, passed Hacken audit), led the **0x → 1inch** secondary-market migration end-to-end, and integrated **account abstraction** (Alchemy + Privy smart wallets) to kill seed-phrase friction.

2022 – present

### Web3 Developer · Makoreactor · self-employed

Independent DeFi/NFT engineering across the full stack. **HyperLend** — repay-with-collateral (ParaSwap), cross-chain bridge, and yield-bearing limit orders with an Envio indexer + keeper bot. Built **OTC and NFT marketplaces** end-to-end.

2022 – 2024

### Web3 Developer · HazelLabs — Qvrse.io

Early engineer on a creator-economy platform (NFTs, ticketing, loyalty). Owned the frontend, wrote and deployed the **Solidity** contracts on **Polygon**, added **OpenZeppelin Governor** DAO voting, and shipped smart wallets that onboarded non-crypto users with no seed phrase.

2020 – 2022

### Frontend Developer · Ineor

Enterprise React at scale for **gaming, betting and FinTech** clients across Europe: real-time admin panels, regulated flows, and shared component libraries. Built internal dev-tooling that auto-mocked production APIs locally.

2018 – 2020

### Frontend Developer · Mikrocop

Built **InDocEdge** (DMS / BPM / RMS): complex document-workflow UIs and compliance-critical interfaces for government and bank clients.
